## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 10-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Noiles (USPN 4,676,798).

With reference to Figure 1, Noiles discloses a prosthesis comprising a substantially rigid shell 64 for attachment to skeletal structure, the shell including a shell wall defining a shell receiving area and a terminal shell margin 70 defining a shell opening to the shell receiving area, and a catch ledge (68); a resiliently yieldable UHMWPE liner 12 for insertion in the shell receiving area, the liner including a liner wall having a liner inner surface defining a liner receiving area the liner wall having a terminal liner margin 22 defining a restricted liner opening to the receiving area 19; and a substantially rigid retainer ring comprising elements 13 and 80 attachable to the shell by means of catch legs and lips (78, 98, and 128) to engage the terminal liner margin and inhibit deformation of the terminal liner margin. The liner extends to envelop a circumferential side apex of a femur ball 10. The inner surface is substantially spherical and the liner extends to envelop greater than a hemisphere of a femur ball. The restricted liner opening has a liner-opening diameter smaller than a largest diameter of the liner receiving area (see Fig. 3). The liner comprises a plurality of expansion slits 23

positioned adjacent the terminal liner margin and extending into the liner whereby the restricted liner opening is enlargeable and can be further restricted. The liner includes a snapping attachment mechanism 17 attaching the retainer ring to the shell, and the snapping attachment mechanism including a catch leg having a catch lip 78 and the shell includes a catch ledge for engaging and holding the catch lip. The catch leg includes a plurality of contraction slots 98 dividing the legs.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-7 and 10-20 have been considered but are moot in view of the new ground(s) of rejection. The rejection has been further clarified to define the rigid ring as comprising both elements 13 and 80 of Noiles.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 3738

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
